

Validation of GNSS-SLR local ties by using space ties

D. Thaller¹⁾, O. Roggenbuck¹⁾, K. Sosnica²⁾, M. Mareyen¹⁾, R. Dach²⁾, A. Jäggi²⁾

1) Bundesamt für Kartographie und Geodäsie, Frankfurt am Main, Germany

2) Astronomical Institute, University of Bern, Switzerland

- Problematic evaluation of Local Ties in „classical“ combination approach
- Alternative combination methods
- GNSS-SLR combination using GNSS satellites as co-location
- Discrepancies between resulting space-geodetic coordinates and Local Ties

„Local Tie“:

3D vector between reference points of space geodetic instruments (GNSS antenna or SLR telescope or ...) at co-located sites

From terrestrial measurements

Discrepancies !

Station coordinates from space techniques:

3D position of reference points of space geodetic instruments (GNSS antenna or SLR telescope or ...)

From space-geodetic measurements

Local ties and space techniques: Validation?

If discrepancies between Local Ties and space techniques exist:

How to evaluate which Local Ties can be used within the combination?

Problem in «classical» combination approach:

Only ERPs and station coordinates are common parameters

- Station coordinates have to be combined
- At least some Local Ties have to be used to connect the techniques
- An independent validation is NOT possible

Alternatives for connecting the space techniques?

Troposphere parameters:

- Common parameters for microwave techniques (GNSS, VLBI, DORIS)

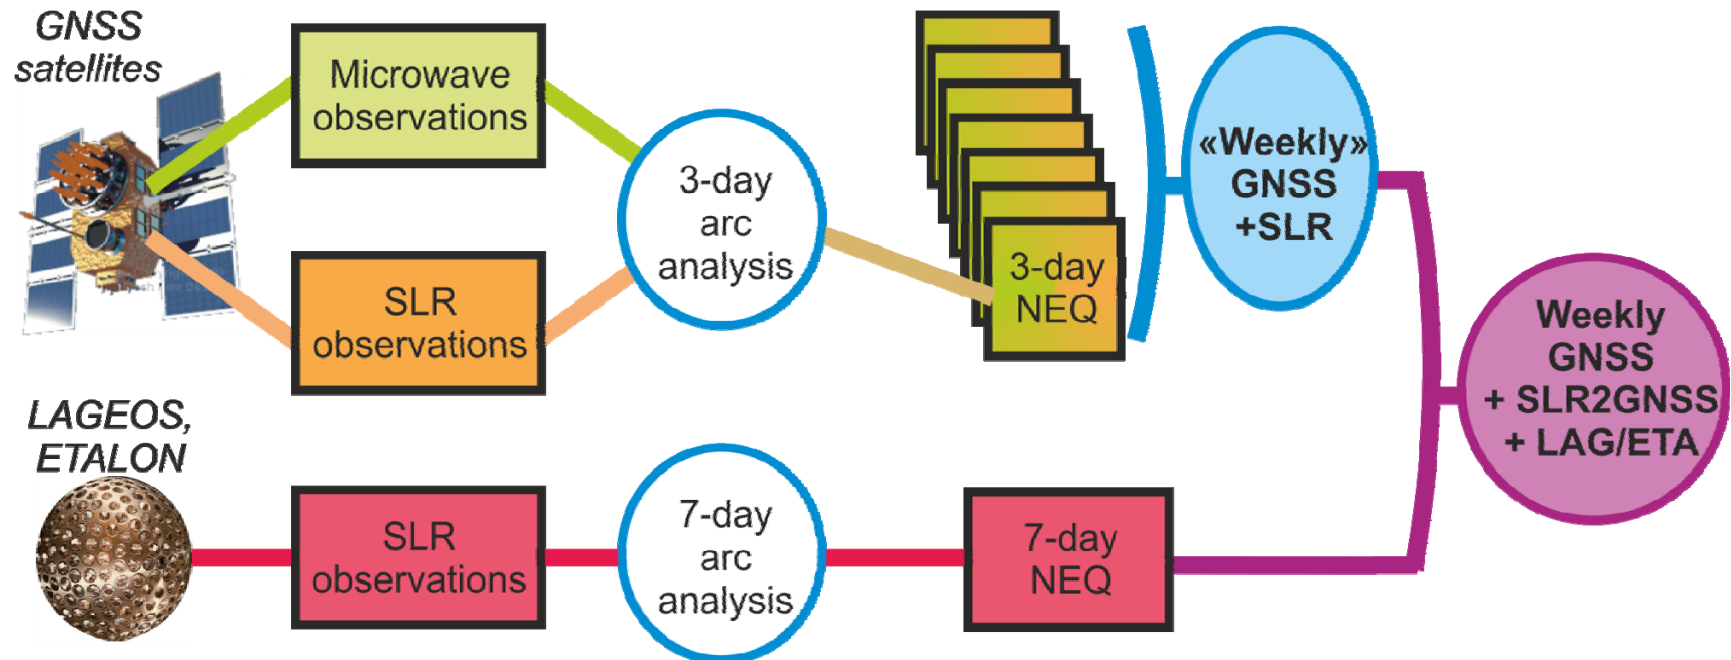

already studied: Krügel et al. (2007), JoG, Special Issue «VLBI»

Thaller (2008), PhD thesis, GFZ STR 08/15

Satellite orbits:

- LEO satellites: GNSS, SLR, DORIS
- **GNSS satellites: GNSS, SLR**

GNSS-SLR combination: Satellite co-location

- Using co-locations at GNSS satellites for connecting both techniques
- Local Ties are not necessary as additional constraint!
- Allowing for an independent comparison

GNSS analysis:

- combined GPS-GLONASS analysis (since June 2003)
- similar to IGS processing at CODE

SLR analysis (spherical satellites):

- combined LAGEOS-Etalon analysis
- similar to ILRS processing at BKG

SLR analysis (GNSS satellites):

Using identical models as for GNSS and SLR-LAGEOS

- Distances of co-located instruments:

Discrepancies at co-locations

3-D agreement:

$0 \text{ mm} < \Delta \leq 10 \text{ mm}$

17 co-locations

$10 \text{ mm} < \Delta \leq 20 \text{ mm}$

13 co-locations

$20 \text{ mm} < \Delta \leq 30 \text{ mm}$

5 co-locations

$30 \text{ mm} < \Delta$

15 co-locations

Discrepancies at co-locations

Height agreement:

$0 \text{ mm} < \Delta H \leq 3 \text{ mm}$	5 co-locations
$3 \text{ mm} < \Delta H \leq 5 \text{ mm}$	10 co-locations
$5 \text{ mm} < \Delta H \leq 10 \text{ mm}$	12 co-locations
$10 \text{ mm} < \Delta H \leq 20 \text{ mm}$	20 co-locations
$20 \text{ mm} < \Delta H \leq 30 \text{ mm}$	4 co-locations
$30 \text{ mm} < \Delta H$	10 co-locations

Discrepancies at co-locations

Horizontal agreement:

$0 \text{ mm} < \Delta H_z \leq 3 \text{ mm}$	10 co-locations
$3 \text{ mm} < \Delta H_z \leq 5 \text{ mm}$	8 co-locations
$5 \text{ mm} < \Delta H_z \leq 10 \text{ mm}$	23 co-locations
$10 \text{ mm} < \Delta H_z \leq 20 \text{ mm}$	10 co-locations
$20 \text{ mm} < \Delta H_z \leq 30 \text{ mm}$	2 co-locations
$30 \text{ mm} < \Delta H_z$	8 co-locations

Discrepancies at co-locations

Horizontal agreement:

$0 \text{ mm} < \Delta H_z \leq 3 \text{ mm}$	10 co-locations
$3 \text{ mm} < \Delta H_z \leq 5 \text{ mm}$	8 co-locations
$5 \text{ mm} < \Delta H_z \leq 10 \text{ mm}$	23 co-locations
$10 \text{ mm} < \Delta H_z \leq 20 \text{ mm}$	10 co-locations
$20 \text{ mm} < \Delta H_z \leq 30 \text{ mm}$	2 co-locations
$30 \text{ mm} < \Delta H_z$	8 co-locations

- Alternative combination methods exist:
 - GNSS-SLR combination via satellite co-location
- Useful for **independent** validation of Local Ties
- Horizontal agreement is better than height agreement (**41 vs. 27 co-locations better than 1 cm**)
- To be improved:
 - Extend for 2011,2012... (more SLR tracking of GLONASS)
 - Check for epoch of Local Ties
- **Reason for discrepancies** have to be identified by other methods!
